## CH2M HILL

# Stormwater Management: Regional Collaboration and Decision Tools for MS4 Permit Compliance

Metropolitan Planning Council

April 8, 2014

Presented by:  
**CH2MHILL.**

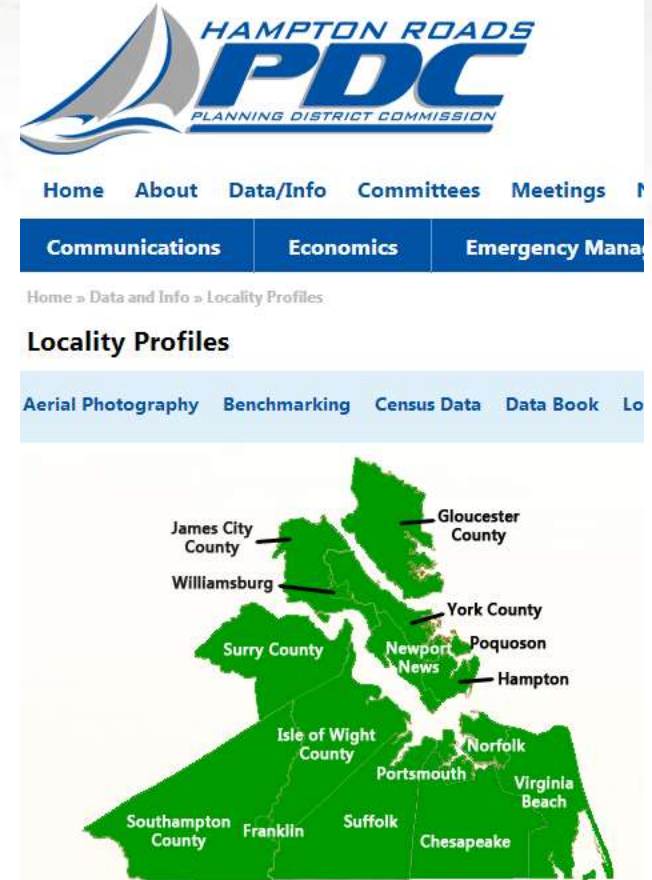

# Presentation Outline

- **Examples of Collaborative Regional Stormwater Programs for MS4 Permits and Climate Resilience**
- **Green Infrastructure Programs at City/County Scale:**
  - Onondaga County NY
  - Lancaster PA
- **Tools:**
  - Site Evaluation Tools – Business Case Analysis
  - Triple Bottom Line Analysis
  - Innovative Financing:
    - Impervious Area Based Stormwater Utility Fees
    - Credits/Rebates
    - Public Private Partnerships

# Collaborative Regional Stormwater Program Examples: HR Storm

(HRstorm.org and askHRGreen.org)

- Stormwater education program of the Hampton Roads Planning District Commission (HRPDC), in Tidewater VA
- Coalition of local government staff members from 16 cities/counties to share ideas and pool resources for targeted educational program efforts about stormwater management
- Started by HRPDC's Regional Stormwater Management Committee in 1992 after NPDES Phase 1 stormwater permits.

# Collaborative Regional Stormwater Program Examples: HR Storm

(HRstorm.org and askHRGreen.org)

HRStorm replaced in 2011 with broader program (stormwater, FOG, recycling, water awareness), and rebranded as askHRgreen.org:

- Materials (brochures)
- Tools
- Media kits
- Tips

Surveys and annual reports (3 online surveys – 2010-2013):

- Gauge the region's environmental literacy
- Identify target audiences for specific behaviors
- Establish a baseline for evaluating campaign progress

The screenshot shows the homepage of askHRgreen.org. At the top, there's a navigation bar with the site name, a search bar, and social media icons. Below that is a green navigation menu with categories like "YOUR SITE", "YOUR HOME", "YOUR YARD", "YOUR BUSINESS", "YOUR COMMUNITY", and "YOUR CLASSROOM". The main content area features a large graphic for the "askHRgreen.org ONLINE MEDIA TOOLKIT" with various icons and a shopping bag. Below this is a section titled "IT'S FUN TO SHARE!" with a paragraph of text and a list of available materials like "LOGOS", "RACK CARDS", "BROCHURES", etc. At the bottom, there are two boxes for downloading logos: "askHRgreen.org Logo" and "Recycle More, Trash Less Logo".

# Collaborative Regional Stormwater Program Examples: Washington DC Region (COG) and Local (TWG)

## MWCOG (<http://www.mwcog.org/environment/water/stormwater.asp>)

- MWCOG's water resources committee facilitates regular meetings on regional regulatory and stormwater management issues for DC, MD, VA localities
- Provides a clearinghouse for resources, though does not produce educational materials

## Washington DC' Stormwater Technical Working Group (interagency collaboration on policy and regulations):

- MS4 reporting
- Guidance and design criteria
- Updated regulations

The screenshot shows the website for the Metropolitan Washington Council of Governments (MWCOC). The main navigation bar includes links for "About COG", "Doing Business with COG", "Human Resources", "Contact Us", and "Site Map". The date "April 5, 2014" is displayed in the top right corner. The page title is "Metropolitan Washington Council of Governments" with the tagline "One Region Moving Forward". The "Environment" section is highlighted, and the breadcrumb trail reads "Home > Environment > Water > Stormwater". The main heading is "Stormwater Management in the COG Region". Below this, there is a "COG water resources" logo and a section titled "A Challenge for Our Region" featuring a photo of a stormwater management facility. To the right, there is a "COG Regional Stormwater Factsheet Released June 2012, revised November 2013." section with a thumbnail image. A sidebar on the right contains a "Navigation" menu with links such as "Overview", "Chesapeake Bay Program Planning", "Potomac River Water Quality Data", "Community Engagement Campaign", "TapIt", "Do Not Flush", "Wise Water", "Stormwater Management", "Blue Plains Regional Committee", "Anacostia Watershed Network", "Water Supply and Drought", "Climate Change", "News", "Publications", "Committees", "Meetings and Events", "Workshops", and "Staff".

# Collaborative Regional Stormwater Program

## Examples: Southeast Florida Climate Compact

<http://southeastfloridaclimatecompact.org/>

Regional agreement of 4 counties to address:

- Sea level rise
- Storm surge
- Extreme precipitation

# Collaborative Regional Stormwater Program

## Examples: Southeast Florida Climate Compact

<http://southeastfloridaclimatecompact.org/>

Regional agreement of 4 counties to address:

- Sea level rise
- Storm surge
- Extreme precipitation

- Studies
- Annual Summit
- Clearinghouse for news, events, documents

# Presentation Outline

- Examples of Collaborative Regional Stormwater Programs for MS4 Permits and Climate Resilience
- **Green Infrastructure Programs at City/County Scale:**
  - Onondaga County NY
  - Lancaster PA
- **Tools:**
  - Site Evaluation Tools – Business Case Analysis
  - Triple Bottom Line Analysis
  - Innovative Financing:
    - Impervious Area Based Stormwater Utility Fees
    - Credits/Rebates
    - Public Private Partnerships

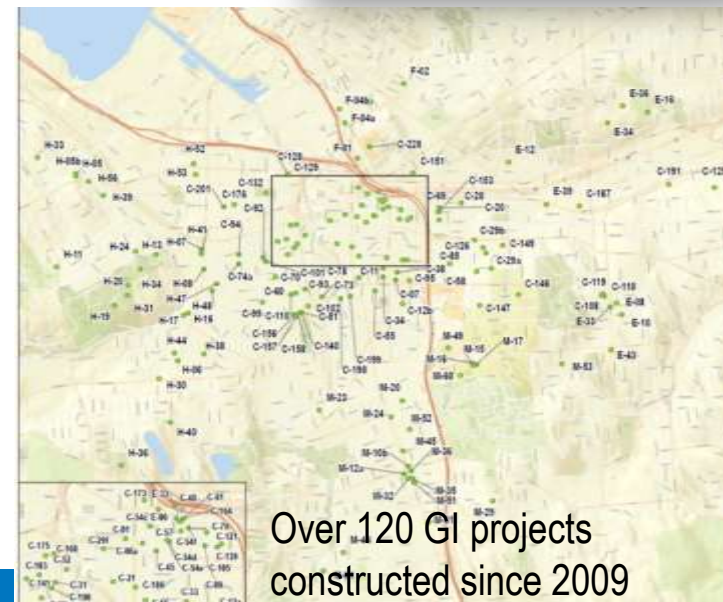

# Balanced Approach to Urban Catchment Management: Gray + Green

# Onondaga County, NY's *Save the Rain* Green Combined Sewer Overflow Program

- Led a rapid planning, analysis, and negotiation process to **amend the federal Consent Judgment** to a balanced green-grey approach
- Formed close partnership between County and City of Syracuse agencies to enable GI implementation
- Completed **Project 50** in 2011 – over 50 distinct GI projects in a single year
- Local, regional, and **national recognition** for the client
- **Signature green projects:** Streets, Parks, Libraries, Post Offices, the Zoo, and:
  - War Memorial Cistern Rainwater Reuse System
  - 1st U.S. Hockey Team to Play on “Green Ice”**
  - OnCenter Convention Center Green Roof
  - 2nd Largest Green Roof in NY (66,000 SF)**
  - Harbor Brook CSO Wetland Treatment System
  - 1st CSO Treatment Wetland in NY**
  - Connective Corridor – **USGBC Leadership Award**

Over 120 GI projects  
constructed since 2009

# Align Regulatory and Community Goals: Water Quantity and Quality Objectives with Quality of Life Impacts

# Provide incentives for retrofitting impervious area on private property

# Understand Infrastructure Drivers, as they can and will Influence Funding

# Connective Corridor Project (Onondaga County, NY)

# Develop Quality Verification Systems to Track Performance and Create Regulatory Transparency

- Parcel level mapping of impervious surfaces, and retrofits
- Robust Monitoring Program (Micro and Macro)
- Modeling (SWMM and other modeling software)

# Develop Quality Verification Systems to Track Performance and Create Regulatory Transparency

- Maintenance Program based on holistic Asset Management (Gray + Green)

# Lancaster Green Infrastructure Program

 Roads & Alleys

 Parking

 Rooftops

# Project Concepts in GI Plan Document Managed Impervious Areas and Secured \$11.5 M in Funds

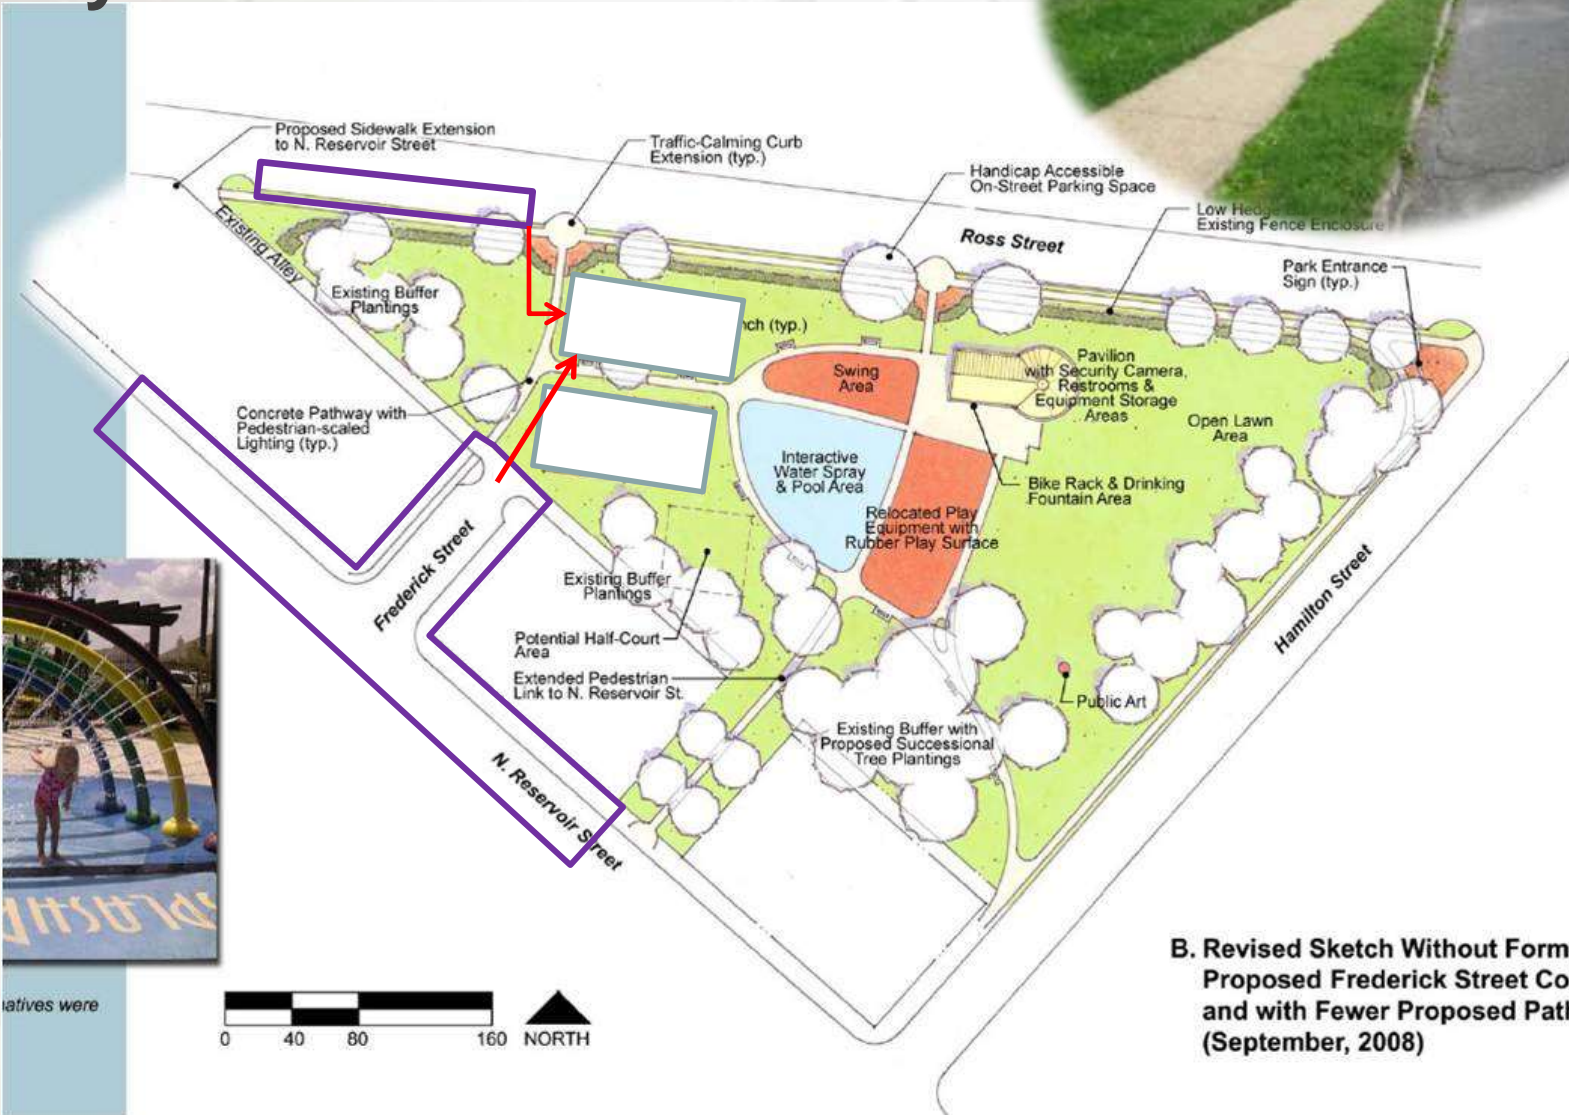

# Implementation Programs

**Based on Integrated Infrastructure:**

- Green Streets & Alleys
- Green Parks
- Green Parking Lots
- Vegetated Roofs
- Enhanced Tree Planting
- Green Schools & Public Facilities
- Private Property

# 6<sup>th</sup> Ward Park Plan – Extending the Benefit of the Playcourt

atives were

**B. Revised Sketch Without Formerly Proposed Frederick Street Connection and with Fewer Proposed Pathways (September, 2008)**

# 6<sup>th</sup> Ward Park Re-dedication Ceremony

# Brandon Park

**4 Million Gallons / year reduction in runoff volume**  
**\$0.15 / gal**

- CSO
- Stormwater Pipes
- Stormwater Pipes
- Vegetated Swale
- Parcel Boundary
- Pervious Playcourt
- Bioretention
- Porous Pavement

# Alley 148 Greened for 10% Additional Cost

**Before (July 2011) ~\$20.30/SF**

**After (February 2012) ~\$22.40/SF**

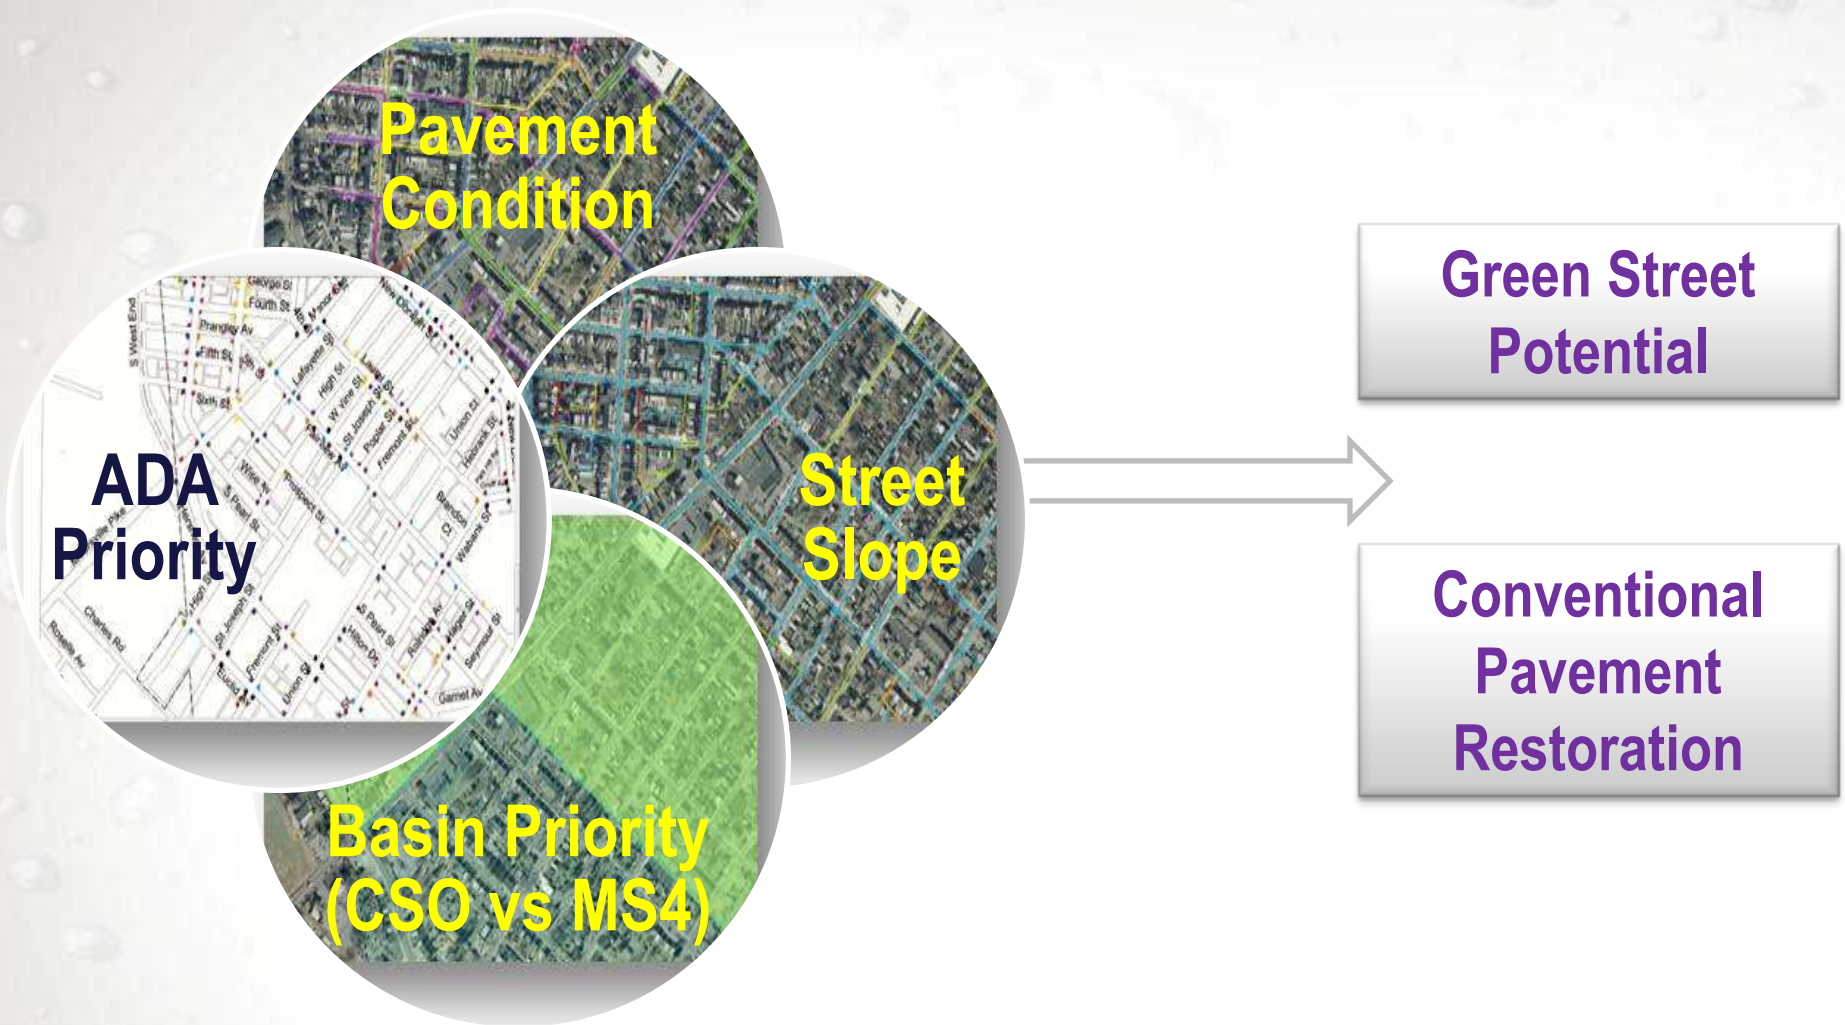

| Component                     | Conventional Unit Cost (\$/square foot) | Green Unit Costs (\$/SF) |
|-------------------------------|---|--------------------------|
| Pavement Removal/Excavation   | \$1.08                                  | \$1.08                   |
| Crushed Stone w/ geotextile   | \$0.35                                  | \$1.39                   |
| Pipes/Cleanouts/etc.          | ---                                     | \$0.82                   |
| 8-inch reinforced concrete    | \$18.89                                 | \$18.89                  |
| Permeable Pavers              | ---                                     | \$19.44                  |
| <b>Total Weighted Average</b> | <b>\$20.32</b>                          | <b>\$22.37</b>           |
| Additional Green Cost (\$/SF) | ---                                     | \$2.05                   |
| Additional Green Cost (%)     | ---                                     | 10%                      |

**Conventional reconstruction ~\$20.30/SF  
(8-inch reinforced concrete)**

**Green alley retrofit ~\$22.40/SF  
(permeable pavers with infiltration trench)**

# Composite prioritization criteria for Pavement Assessment, ADA Ramps, and GI

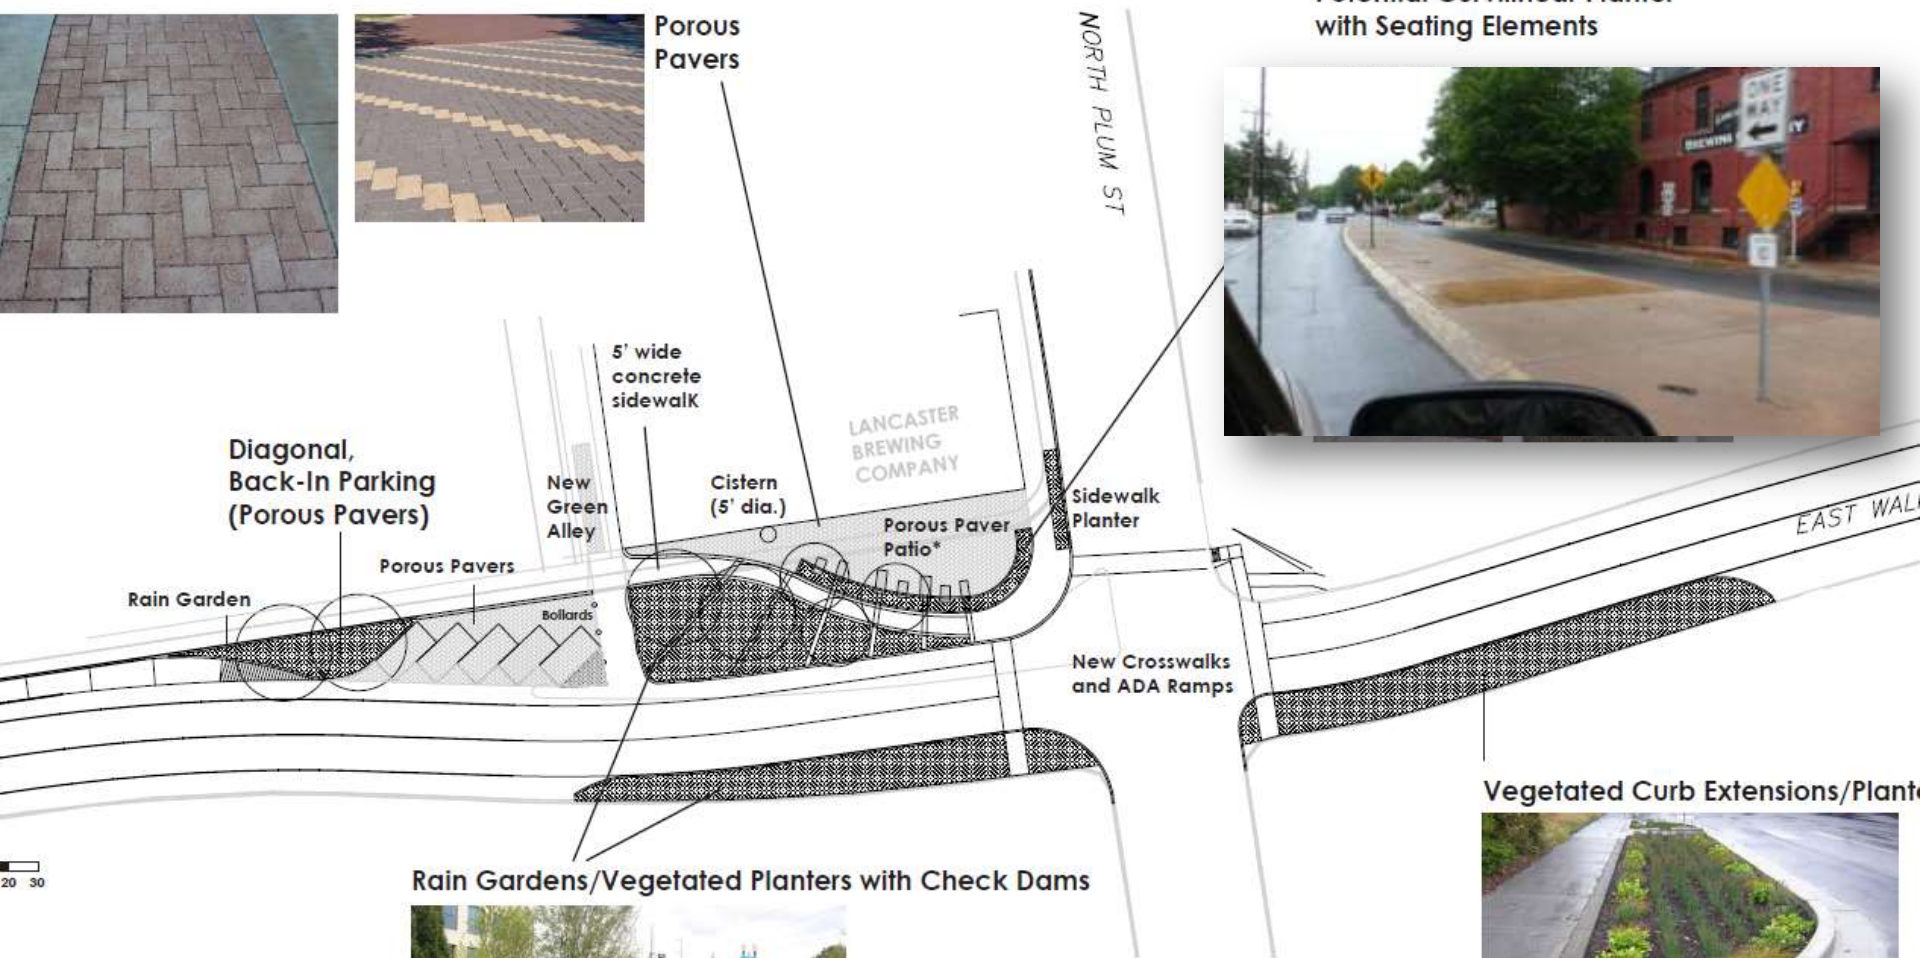

# Using traffic safety and transportation funding to reduce accidents *and* runoff

Porous Pavers

Potential Curvilinear Planter with Seating Elements

20 30

Additional Required Work:

GI Construction \$/gal:

| Green Infrastructure Measure    | Description  | Unit | Unit Cost |
|---------------------------------|--|------|-----------|
| Rain Garden                     | Intended to collect runoff volume in a depression that ponds volume and may or may not include overflow piping   | SF   | \$ 30     |
| Bio-Retention                   | Similar to a rain garden, and includes subsurface storage and underground piping, and an overflow system of some type  | SF   | \$ 35     |
| Underground Infiltration System | Subsurface stormwater storage system consisting of clean gravel, modular storage (such as steel chambers, etc.), and deep enough to penetrate below frost depth; intended to store fall runoff volume while infiltration occurs over time (commensurate with soil infiltration testing); typically manages runoff from an area at least 5 times its own area | SF   | \$ 25     |
| Green Roof                      | Intended to be able to collect 10 inch of runoff before overflow, or system will be protected by OGDVEP accordingly (unit cost funding may be higher if Green Roof is only GI option available on property)  | SF   | \$ 12     |
| Porous Pavement                 | All types, including adequate subbase to store runoff volume in accordance with site requirements; typically designed to manage runoff from adjacent impervious area (conventional pavement, roof areas, etc.)   | SF   | \$ 12     |
| Tree                            | Caliper size must be 2 inches or greater   | Eq   | \$ 400    |
| Tree Pit/Trench                 | Must exhibit characteristics of Underground Infiltration System  | SF   | \$ 25     |
| Cistern Capture & Release       | The "Funding Limit for GI" (\$/gal) is provided at 75% when using this type of system  | Gal  | \$ 30     |
| Cistern Retain                  | The "Estimated Annual Runoff Capture" is provided at 75% when using this type of system  | Gal  | \$ 30     |
| Added Green Space               | Also known as "removal of impervious area," impervious area and subbase (if any) must be completely removed, subgrade adequately prepared, and suitable soils installed  | SF   | \$ 0      |
| Dry Well                        | These are evaluated on a case-by-case basis, as they come in many shapes and sizes depending on the applicator; expectation is that they perform similar to Underground Infiltration Systems; contact OGDVEP to confirm Unit Cost  | Gal  | \$ 30     |

| Green Roof Unit Costs |                  |
|-----------------------|------------------|
| Roof Priority         | Unit Cost per SF |
| Low                   | \$ 4             |
| Medium                | \$ 8             |
| High                  | \$ 12            |
| Priority              | High             |

| Step Six                                   |  |   |
|--|--|---|
| Cost Summary Table                         |  |   |
|  | Requested Funding (Based on Application) | Maximum Funding (Lesser of Application versus Calculator) |
| GI Construction                            | \$0.00                                   | \$0.00  |
| GI Engineering                             | \$0.00                                   | \$0.00  |
| Field Testing                              | \$0.00                                   | \$0.00  |
| <b>Final Maximum Funding (NTE Actual):</b> |  | <b>\$0.00</b>   |

Notes:

- This calculator has been revised to reflect the most recent GI program modifications (June 2013). It should not be used to calculate award values for previously reviewed projects.
- This calculator is solely for the purposes of Save the Plain GI application funding determinations, and specifically not for design, pricing, or other GI purposes.
- Save the Plain is not responsible for potential calculator errors, and all values are subject to review, approval, and verification by Chondaga County.
- If actual GI construction cost is expected or known to be less than the Maximum Funding (based on calculator), this value should be entered accordingly.

# Triple Bottom Line Analysis of Adaptation Strategies Promotes Mitigation and Other Co-Benefits (Economic, Social, Environmental)

## DC Water GI Challenge Award Submissions

**Enhanced Wildlife Habitat, Pollinator Food Sources, and Biodiversity** (Leaf icon)

**New and Improved Public Park Space and Community Gathering Space** (People icon)

**Enhanced Street and Public Space Aesthetics** (People icon)

**Positive Impact on Carbon Sequestration, Reduction in Air Pollutants, and Energy Use Reductions** (Globe, Leaf, and Water icons)

**Enhanced Property Values Adjacent to the Site** (Dollar sign icon)

**Connection to Environmental Educational Initiatives at Adjacent Neighborhood School** (People icon)

**ENVIRONMENTAL BENEFITS**  
(Leaf, Water, and Globe icons)

**ECONOMIC BENEFITS**  
(Dollar sign icon)

**SOCIAL BENEFITS**  
(People icon)

**Sustainable Capture of Roadway Runoff** (Water icon)

**Reduced Flooding and Improved Drainage** (Water icon)

**Green Jobs Created For Bioretention Maintenance** (Dollar sign and People icons)

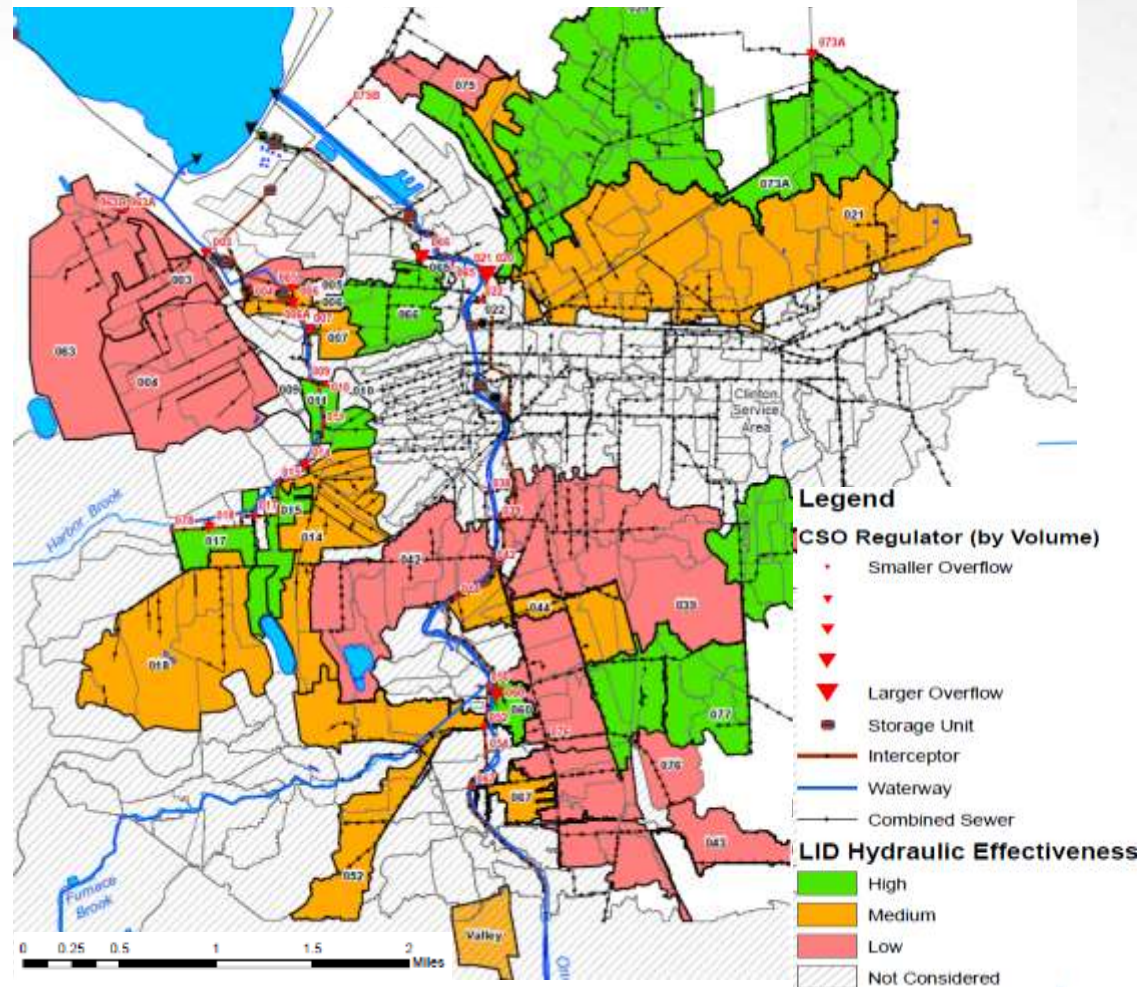

# Modeling and Optimization Tools Can Target GI Retrofits for Maximum CSO Reduction Efficiency

## Factors affecting LID impact

- Baseline condition overflow
  - Degree / frequency of surcharge
- Regulator hydraulics
- Hydraulic interactivity from adjacent basins

CSO Reduction Efficiency:- 10-Day Period

Efficiency = CSO volume Reduced ÷ Inflow Volume Reduced

# Stormwater user fees are an equitable mechanism for funding stormwater programs

- 💧 ***Regulatory compliance requirements***
- 💧 ***Stormwater management needs***
- 💧 ***Economic development initiatives***

To address these issues, a ***reliable, dedicated*** funding mechanism is needed

# Leveraging Grants and SRF Loans to Incentivize Green Infrastructure Investments

- **Incentive Programs** Encourage Installation of Stormwater Projects on Private Property, Helping with MS4 and CSO Permit Requirements

## • Incentives come in 2 forms:

- **Rebates or Grants** 1 time assistance with construction cost:
  - For example up to \$1,200 for residences, \$5,000 for businesses to install GI
- **Credits** – a percentage reduction in the annual impervious area fee:
  - For example up to 50% for businesses treating impervious area with green infrastructure projects

RainScapes Rewards Rebates Program

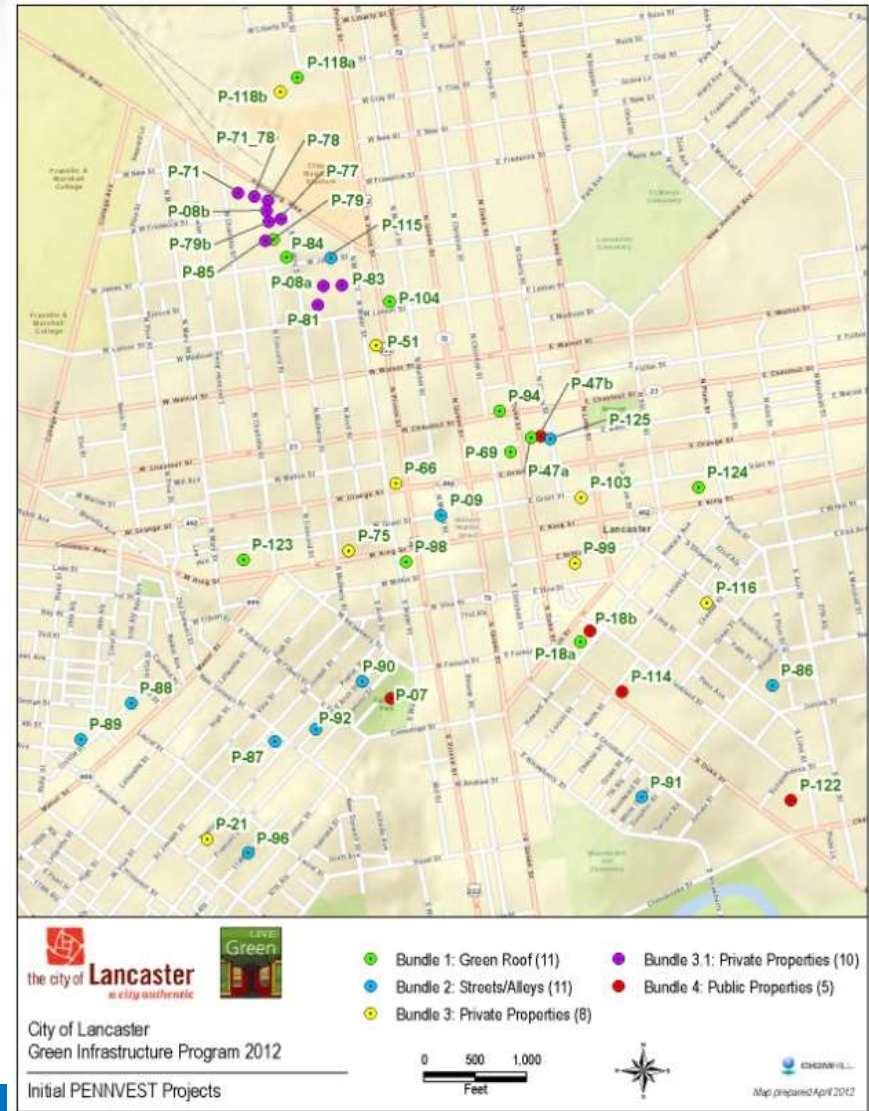

Save the Rain

Green Improvement Fund (GIF)

# Innovative Financing: Using the SRF to create Public-Private Partnerships

- 💧 **\$7 M SRF Loan**
- 💧 **2 Programs**
  - 💧 Green Roofs
  - 💧 Other
- 💧 **Private Landowners provide**
  - 💧 10% of construction costs
  - 💧 30 yr maintenance agreement
- 💧 **City is also implementing a Green Alley Program that residents pay \$500 into repaving costs**

# Onondaga County NY, Green Improvement Fund - Lessons Learned

## Demand Exists!

-  \$ 6 M in awards
-  121 applications submitted for grant funding to-date
-  40 Grant awarded project completed
-  20 Projects currently under construction
-  40 Projects under contract for 2014 Construction Season

## Transparency of Process is Paramount

## It's OK to modify program-Must adapt as program evolves

-  A project in 2013 will not necessarily receive the same grant funding as a project in 2010
-  Funding Caps Promote Bad Behavior
-  Tiered Approach allows for both small and large scale projects
-  Small scale projects contribute to community support
-  Business case ensures value to City and County
-  A thorough review process will ensure a good outcome

# Green Up DC web site makes it easy for property owners to make decisions about green projects

**Resources & Information**  
Find what you'll need, from getting started to completion.

Start Your Green Projects

# runoff calculated with rainfall-runoff method from center for watershed protection

- + Pre-loaded impervious area data
- + 9 project types
- + Context-sensitive information
- + Runoff before treatment is calculated from preloaded impervious area information

The screenshot displays the 'green up dc' web application. The top navigation bar includes 'Welcome', 'Plan Your Projects' (highlighted), 'Installed Projects', 'Program Status', and 'Resources & Information'. A 'Log In' button is visible in the top right. The main content area features a map of a residential street labeled 'HALF ST'. A red box on the map highlights a specific property. To the right of the map is a sidebar with the following options: 'Plan Your Own Green Up Project(s)', 'Select Your Property', and 'Plan Your Project(s)' (highlighted). Below these are instructions: 'Click [here](#) to view your property footprint. Did you know that there are many incentives to make your Green Up project more affordable? Click [here](#) for more information. Select your project(s) from the categories and follow the steps below to start planning.' The sidebar also shows 'Energy Conservation' and 'Stormwater' (highlighted) categories. Under 'Step 1: Choose Your Project Type(s)', there is a checklist of project types:  Green Roof,  Rain Barrel/Cistern,  Rain Barrel/Cistern #2,  Rain Barrel/Cistern #3,  Pavement Removal,  BayScaping,  Downspout Disconnection,  Permeable Pavement,  Rain Garden,  Rain Garden #2,  Stormwater Infiltration, and  Tree Planting. A callout box at the bottom right of the map area contains the text: 'Users can choose from up to 9 project types'. The map includes a scale bar (0, 30, 60ft) and a 'powered by DC GIS' logo.

# Conclusions and Lessons Learned

- 💧 **Regional collaboration increases effectiveness of stormwater programs, particularly for education and financing**
- 💧 **Regional collaboration successes tied to strong leadership and clear goals and funding**
- 💧 **Balancing grey with green infrastructure approaches can lead to cost effective compliance, and alignment of community and regulatory goals**
- 💧 **Tools are available to target stormwater retrofits, align infrastructure asset management programs, and incentivize private sector participation**

# SUSAN HARPER SEATTLE PUBLIC UTILITIES

**RAINWISE 2013**

# BOB NEWPORT US EPA REGION 5

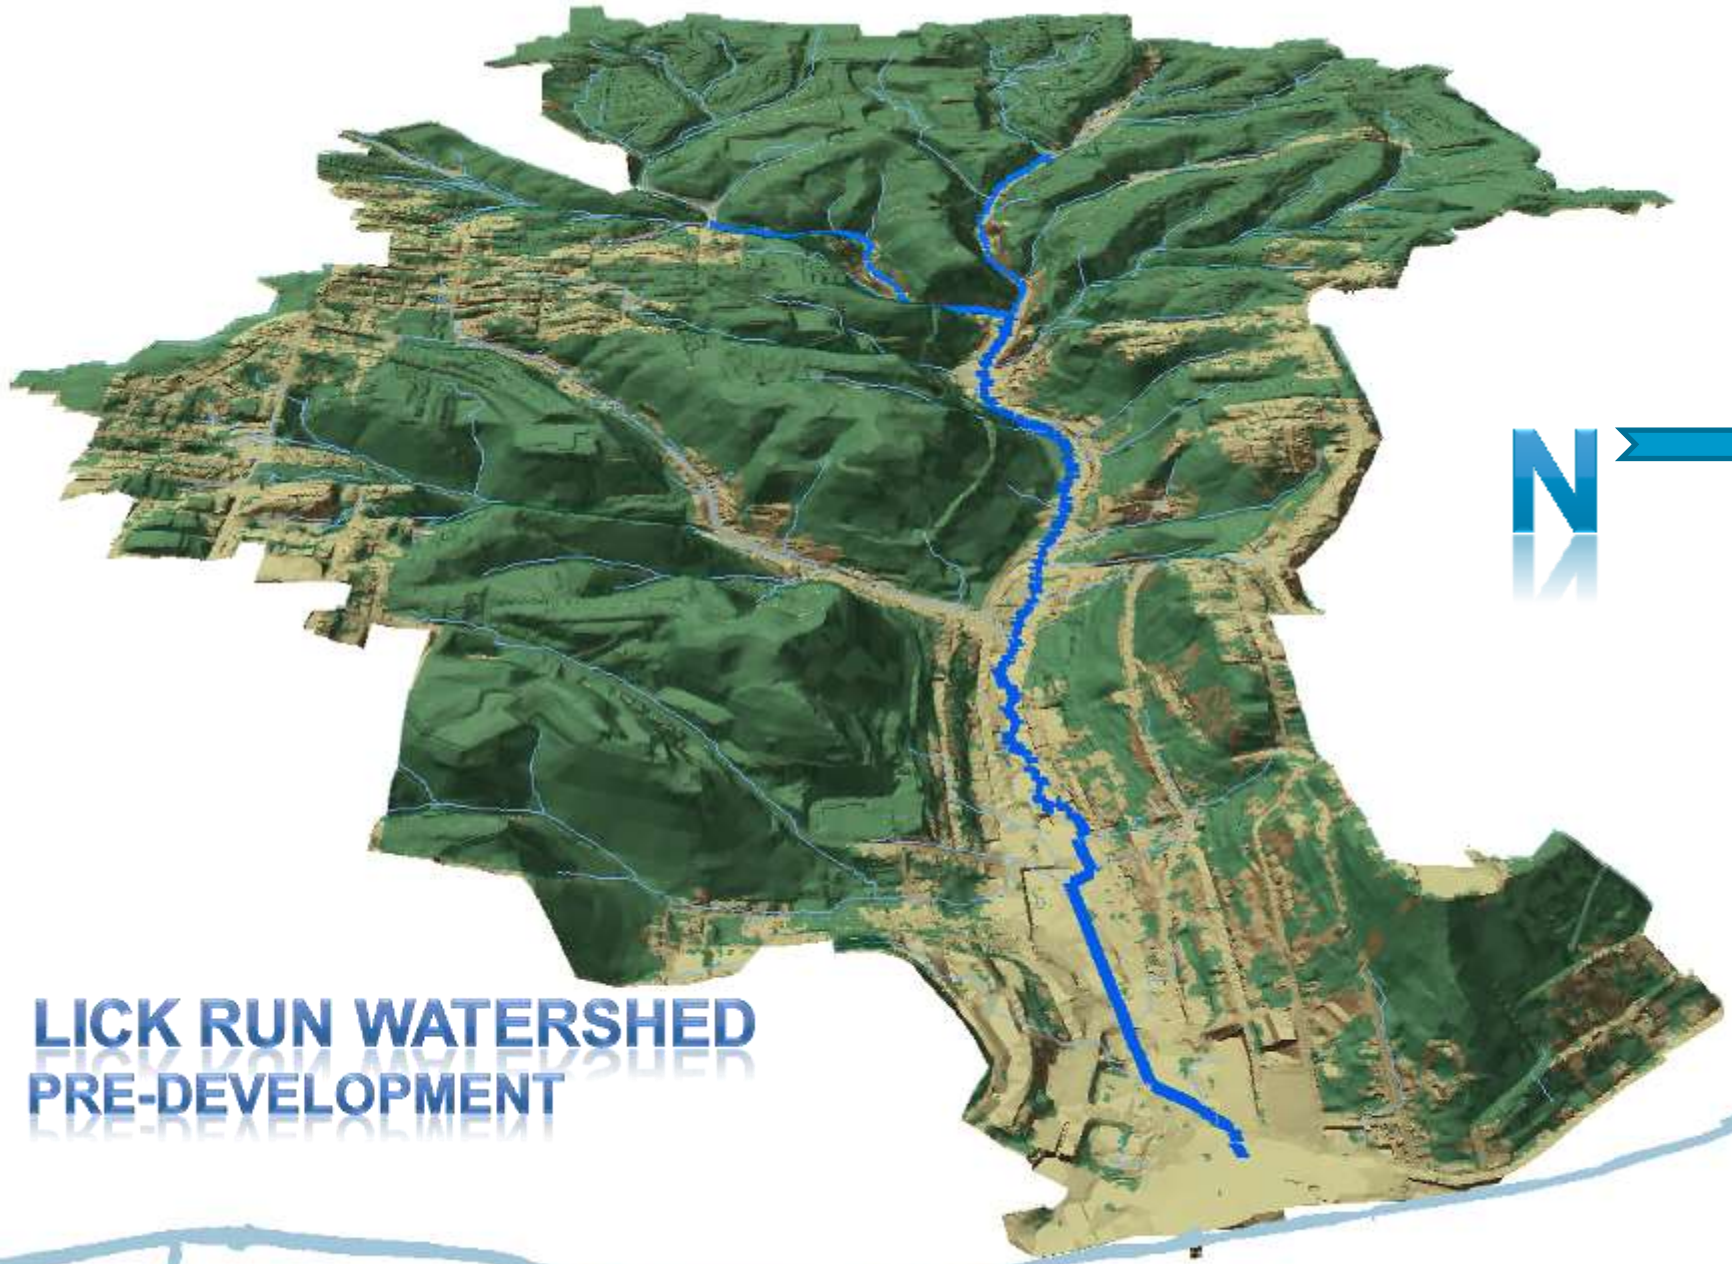

# Collaborative Stormwater Solutions

Bob Newport

April 8, 2014

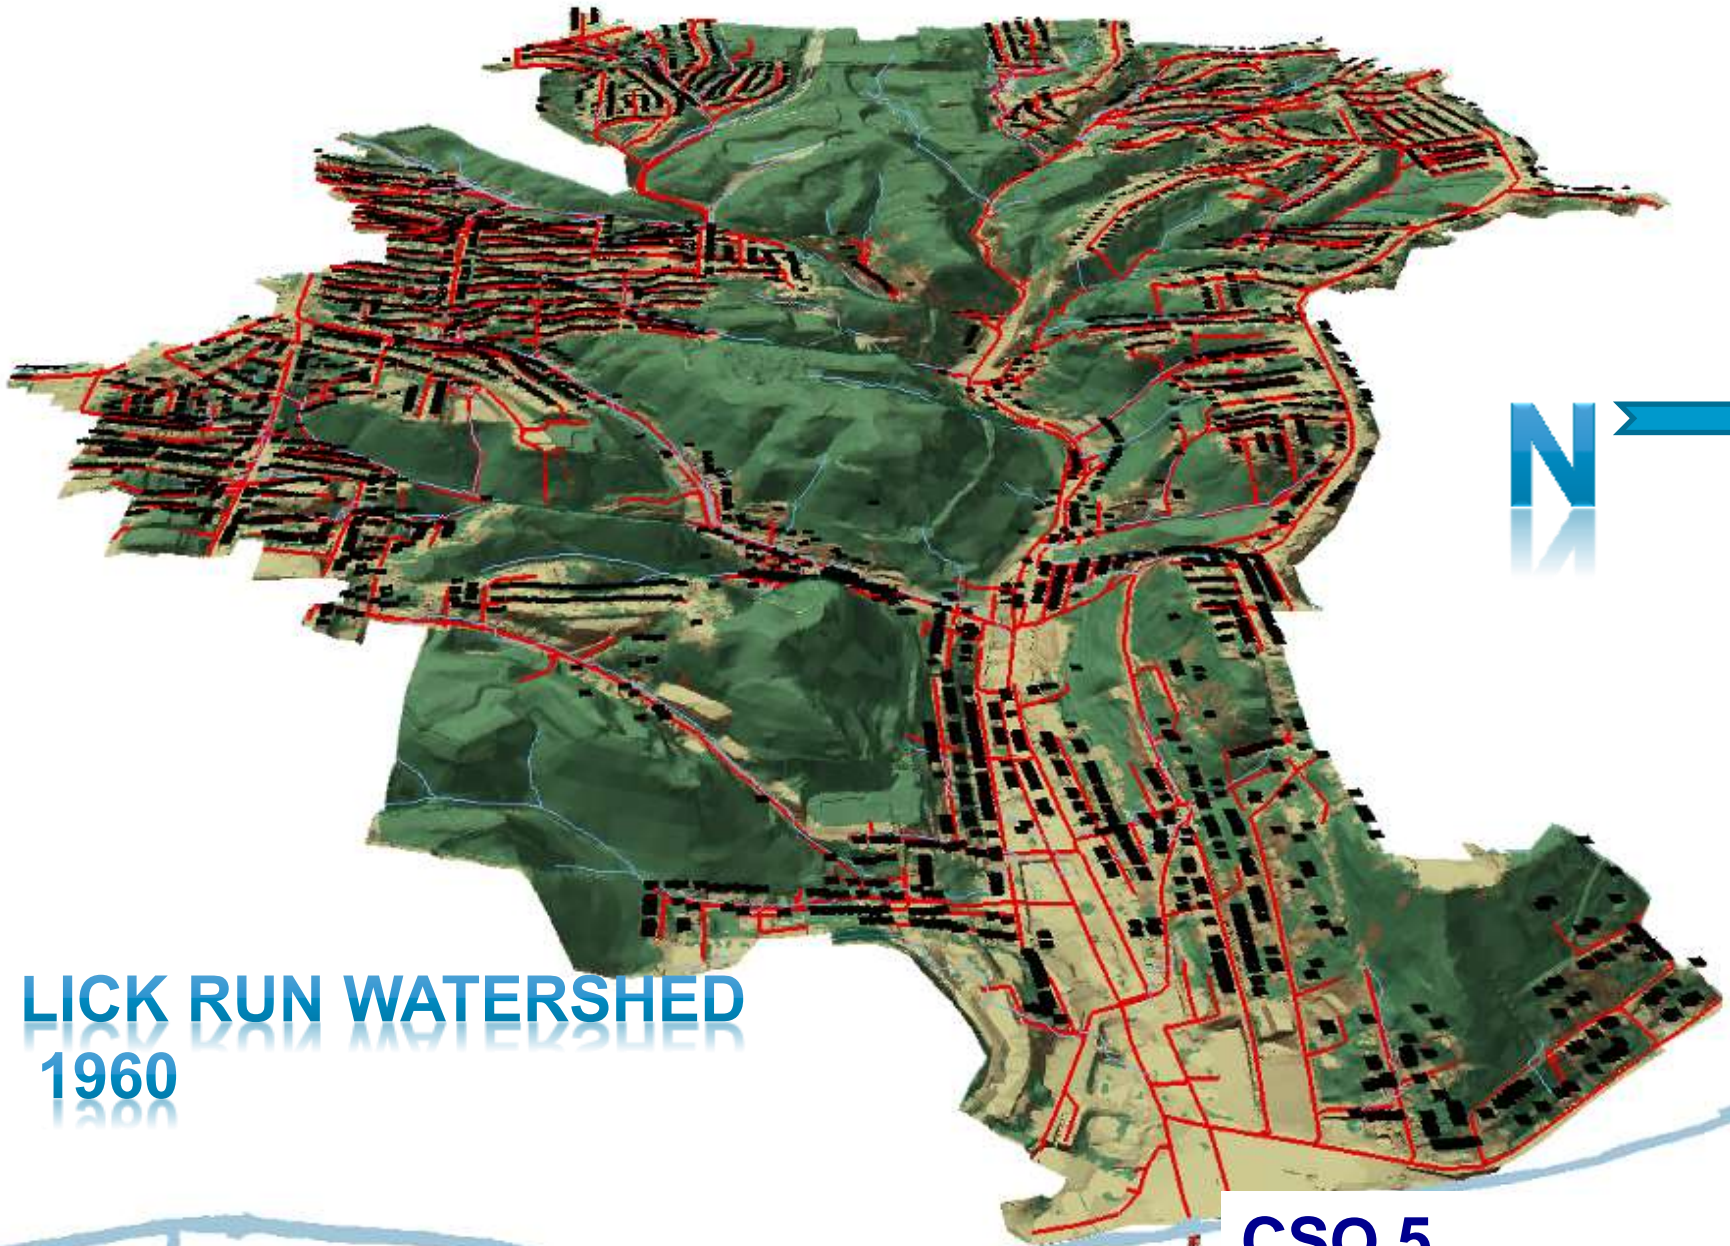

# Case Study- Cincinnati

**LICK RUN WATERSHED  
PRE-DEVELOPMENT**

# Case Study - Cincinnati

**LICK RUN WATERSHED**  
**1960**

**CSO 5**

# Implementation Example Cincinnati

# **A “Win” for the Cincinnati CSO Program**

**(Lower Mill Creek Service Area )**

**Default solution: Tunnel**

**Alternative solution: Keep water out of the system (strategic sewer separation, “green corridor) and “right size” grey infrastructure components**

**Reduction in CSOs: 1.78 billion gallons (in a typical year for these sewersheds)**

## **Costs**

- **Default: \$414.4 million** (2006 dollars)
- **Alternative: \$244.3 million** (2006 dollars)

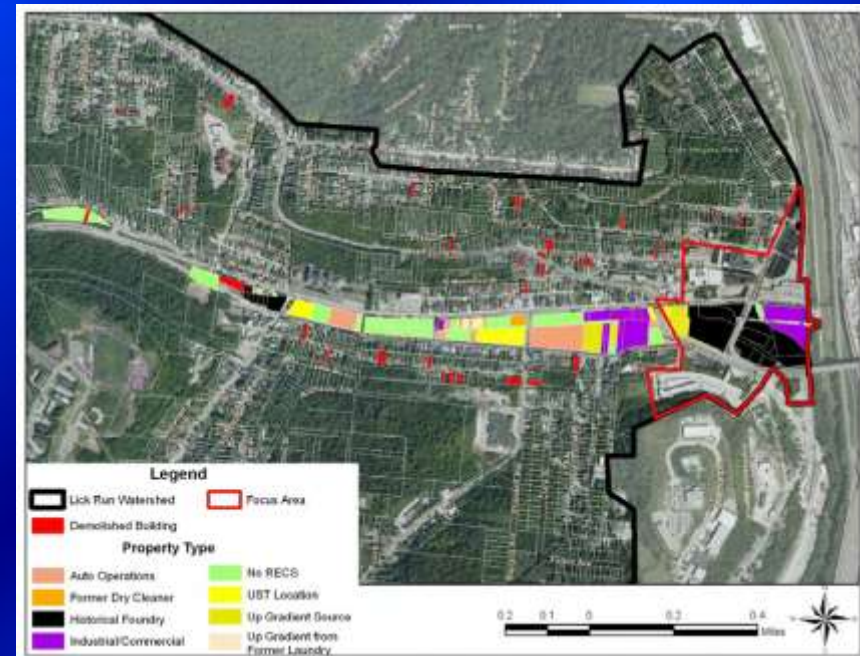

# A Potential “Win” for the Community

- Adjoining streets will be “parkside drives”
  - Economic revitalization opportunities
- Open space and recreation
  - Neighborhood amenities
  - Health benefits

# But Logistically More Complicated for the Sewer District

- Land acquisition
- Brownfield issues
- Demolitions
- Historic preservation
- Re-route surface transportation network
- Zoning
- Community involvement
- Maintenance

# Partnerships and Stakeholders

- City & County Departments
- Mill Creek Restoration Project
- Community Building Institute – Xavier University
- University of Cincinnati
- Local Initiative for Support Corporations (LISC)
- OKI Regional Council of Governments
- Chamber of Commerce Agenda 360
- US Green Building Council
- Business owners in the Corridor
- Neighborhood Organizations
- Green Partnership of Greater Cincinnati
- Cincinnati Preservation
- State of Ohio
- Port Authority of Greater Cincinnati
- Cincinnati Park Board

So Collaboration Can Produce Win-Win Outcomes, and Looking Across Organizational Budgets, It Can Help Save Money

But Providing for Effective Collaboration Can Seem Like A Lot of Work, and There Can Be Many Logistical and Institutional Barriers to Overcome

# Collaborations Between Stormwater Authorities and Park Districts

- Parks provide opportunities for stormwater practices
- But there has to be something in it for the Park District
  - New and Existing Park Demands
    - Trails and connectivity
    - Natural areas and habitat restoration
  - Reduced Maintenance Costs
    - Mowing grass costs money!
    - Native plantings instead of turf

## Key Point #1

Creating an interconnected system of parks and open space is manifestly more beneficial than creating parks in isolation.

## Key Point #2

Cities can use parks to help preserve essential ecological functions and to protect biodiversity.

## Key Point #3

When planned as part of a system of green infrastructure, parks can help shape urban form and buffer incompatible uses.

## Key Point #4

Cities can use parks to reduce public costs for stormwater management, flood control, transportation, and other forms of built infrastructure.

# Village of South Holland Veterans Memorial Park

**Village of South Holland, Veterans Memorial Park**  
**Let's Add a Natural Area!**  
**Naturalized Stormwater Basin**

# Inverness Park District Natural Drainage System at South Park

# Geneva School District Geneva Middle School North

# Homeowner Associations

**Danada Woods Homeowner Assoc.  
Naperville, IL**

# Corporate Campuses

**Tellabs  
Naperville, IL**

# Collaborations between Stormwater Authorities and Transportation Organizations

- In almost any city there are opportunities for green streets

Grange Avenue Bioswale  
Greendale, WI

# Traffic Calming

**NE Siskiyou Street  
Portland, OR**

# **Collaborations between Stormwater Authorities and Transportation Organizations**

**Excellent opportunities, but implementation challenges can often be encountered, e.g.,**

- Design standards don't seem to accommodate the green practice**
- Combining funding sources may be logistically complicated**
- Who will do the maintenance?**

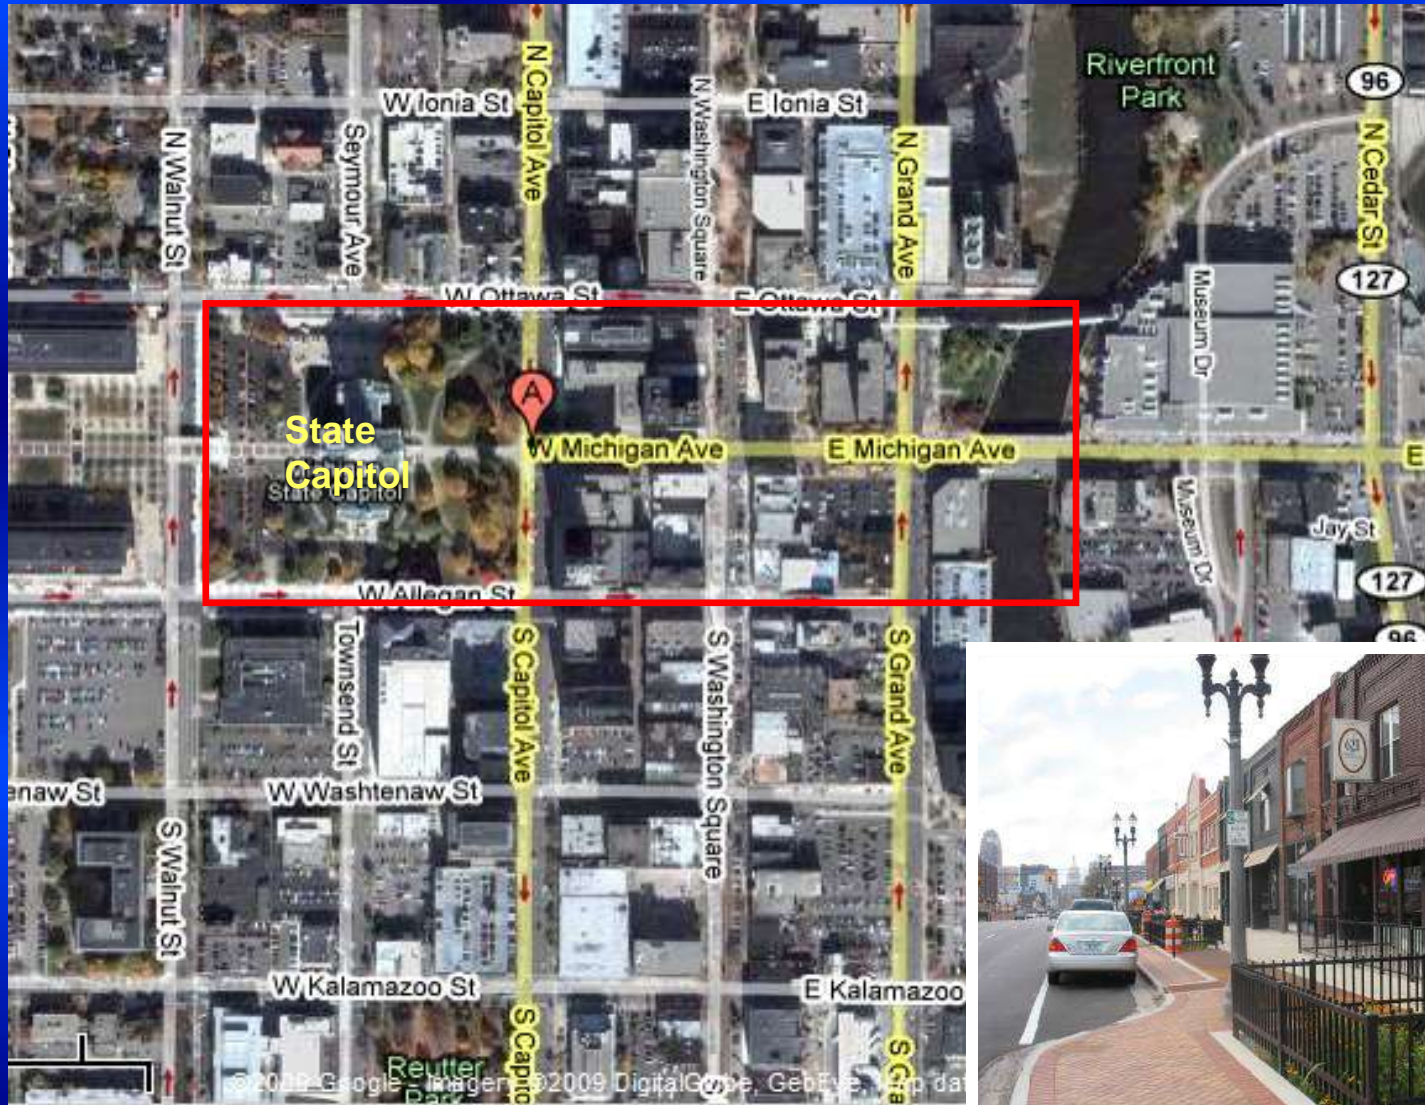

# Aligning Schedules

**It is almost always less expensive to put in place green features at the time road repairs or replacements are being made vs. doing the green infrastructure as a stand-alone project**

# Transportation, Economic Development, and Stormwater - Lansing, MI

# Michigan Avenue

TetraTech and C2AE

Before

# Michigan Avenue

- 4 city blocks, both sides
- Typical garden, no overflow for 1-inch event
- 600 block north side, no overflow for 4.1-inches (25-year event)

# Economic Development

- Department of Commerce
  - “Green” Industrial Park
- Small Business Administration
  - Firms to perform maintenance
- Entry level landscaping: Job skills with inspiring purpose
- “For the first time, I can go home and tell my mother I’m proud of what I’m doing”

*Chicago GreenCorps  
at Our Lady Gate of Heaven project site*

# Brownfields Program

- Implementing stormwater practices on infill sites and vacant parcels – some may be Brownfield properties
- Collaboration with the Brownfields program is needed to make sure all legal requirements are met and to make sure there are no unexpected or unintended consequence from implementation of a stormwater control measure
- **Example: infiltration practices where there is soil contamination**

# Land Banks

## \$100 million in federal funds to be dispersed to 5 Michigan cities

Detroit to see \$52.3 million for blight removal; Flint, Grand Rapids, Pontiac, Saginaw also receiving funds

Author: Joanne Marie Hoopes, ClickOnDetroit.com writer

## Challenges After Demolitions

- Basements
- Impervious Surfaces
- Rocks and Debris
- Poor Soils for Vegetation

# EPA Region 5

## Residential Demolition

### Bid Specification Development Tool

#### On the Road to Reuse:

Residential Demolition Bid  
Specification Development Tool

# Menu of Bid Spec Modifications to Improve Demo Practices

- Soils for Earthwork
- Placement of Fill
- Grading
- Soil Stabilization and Seeding
- Impervious Surface Removal
- Pre-Demolition Survey
- Asbestos NESHAP Compliance
- Managing Harmful Dust
- Waste Management Plan
- Recycling and Salvage
- Waste Handling and Disposal
- Deconstruction

Earthworks Bid Specs

The diagram consists of two blue curly braces on the right side of the slide. The top brace groups the first five items of the list: 'Soils for Earthwork', 'Placement of Fill', 'Grading', 'Soil Stabilization and Seeding', and 'Impervious Surface Removal'. The bottom brace groups the remaining seven items: 'Pre-Demolition Survey', 'Asbestos NESHAP Compliance', 'Managing Harmful Dust', 'Waste Management Plan', 'Recycling and Salvage', 'Waste Handling and Disposal', and 'Deconstruction'. The text 'Earthworks Bid Specs' is positioned to the right of the top brace, and 'Waste Management Bid Specs' is positioned to the right of the bottom brace.

Waste Management Bid Specs

# Coordinate Stormwater Program with work on Climate Change, Resiliency, and Flooding

# Methods for Effective Collaboration

- Convene discussions with local groups, State agencies, Federal partners
- Convene discussions with business leaders on issues such as how green can contribute to economic revitalization and jobs
- Leveraging funding for related projects (e.g., lining up HUD or DOT funds to combine with stormwater funds)
  - Integrated asset management
- Engage foundations in discussions on opportunities for involvement
- Technical assistance on Brownfield issues
- Technical assistance on property acquisition/assembling parcels
- Technical assistance on historic preservation and adaptive re-use of buildings
- Technical assistance on institutional arrangements (e.g., partnerships with parks, partnerships with schools)
- Technical assistance on updating zoning, codes and ordinances

# Methods for Effective Collaboration

- Look for common goals, establish shared vision
- Look for win-win situations, usually should be something in the plan for collaborating partners
  - Multi-purpose projects
- Communicate and quantify
- Identify barriers
  - Budgeting/cost-sharing
  - Timing
  - Ordinances
  - Standard Methods (e.g., DOT Manual)
    - Immediate solutions (variance)
    - Long-term solution (update manual, update ordinance)

Please wait for the microphone; state your name and affiliation
