

RAIN READY COMMUNITY TOOL

For the Calumet Stormwater Collaborative

March 1, 2019

Dawn Walker & Peter Haas

Center for Neighborhood Technology

AGENDA

- RainReady Calumet Corridor Planning + Implementation
- Tool Review
- What's Next
- Feedback

PLANNING AND IMPLEMENTATION

Planning + Engagement

- Flood Solutions Community Tool
- Community Meetings
- Survey
- Plan Review
- Steering Committees
- Workshops

Implementation

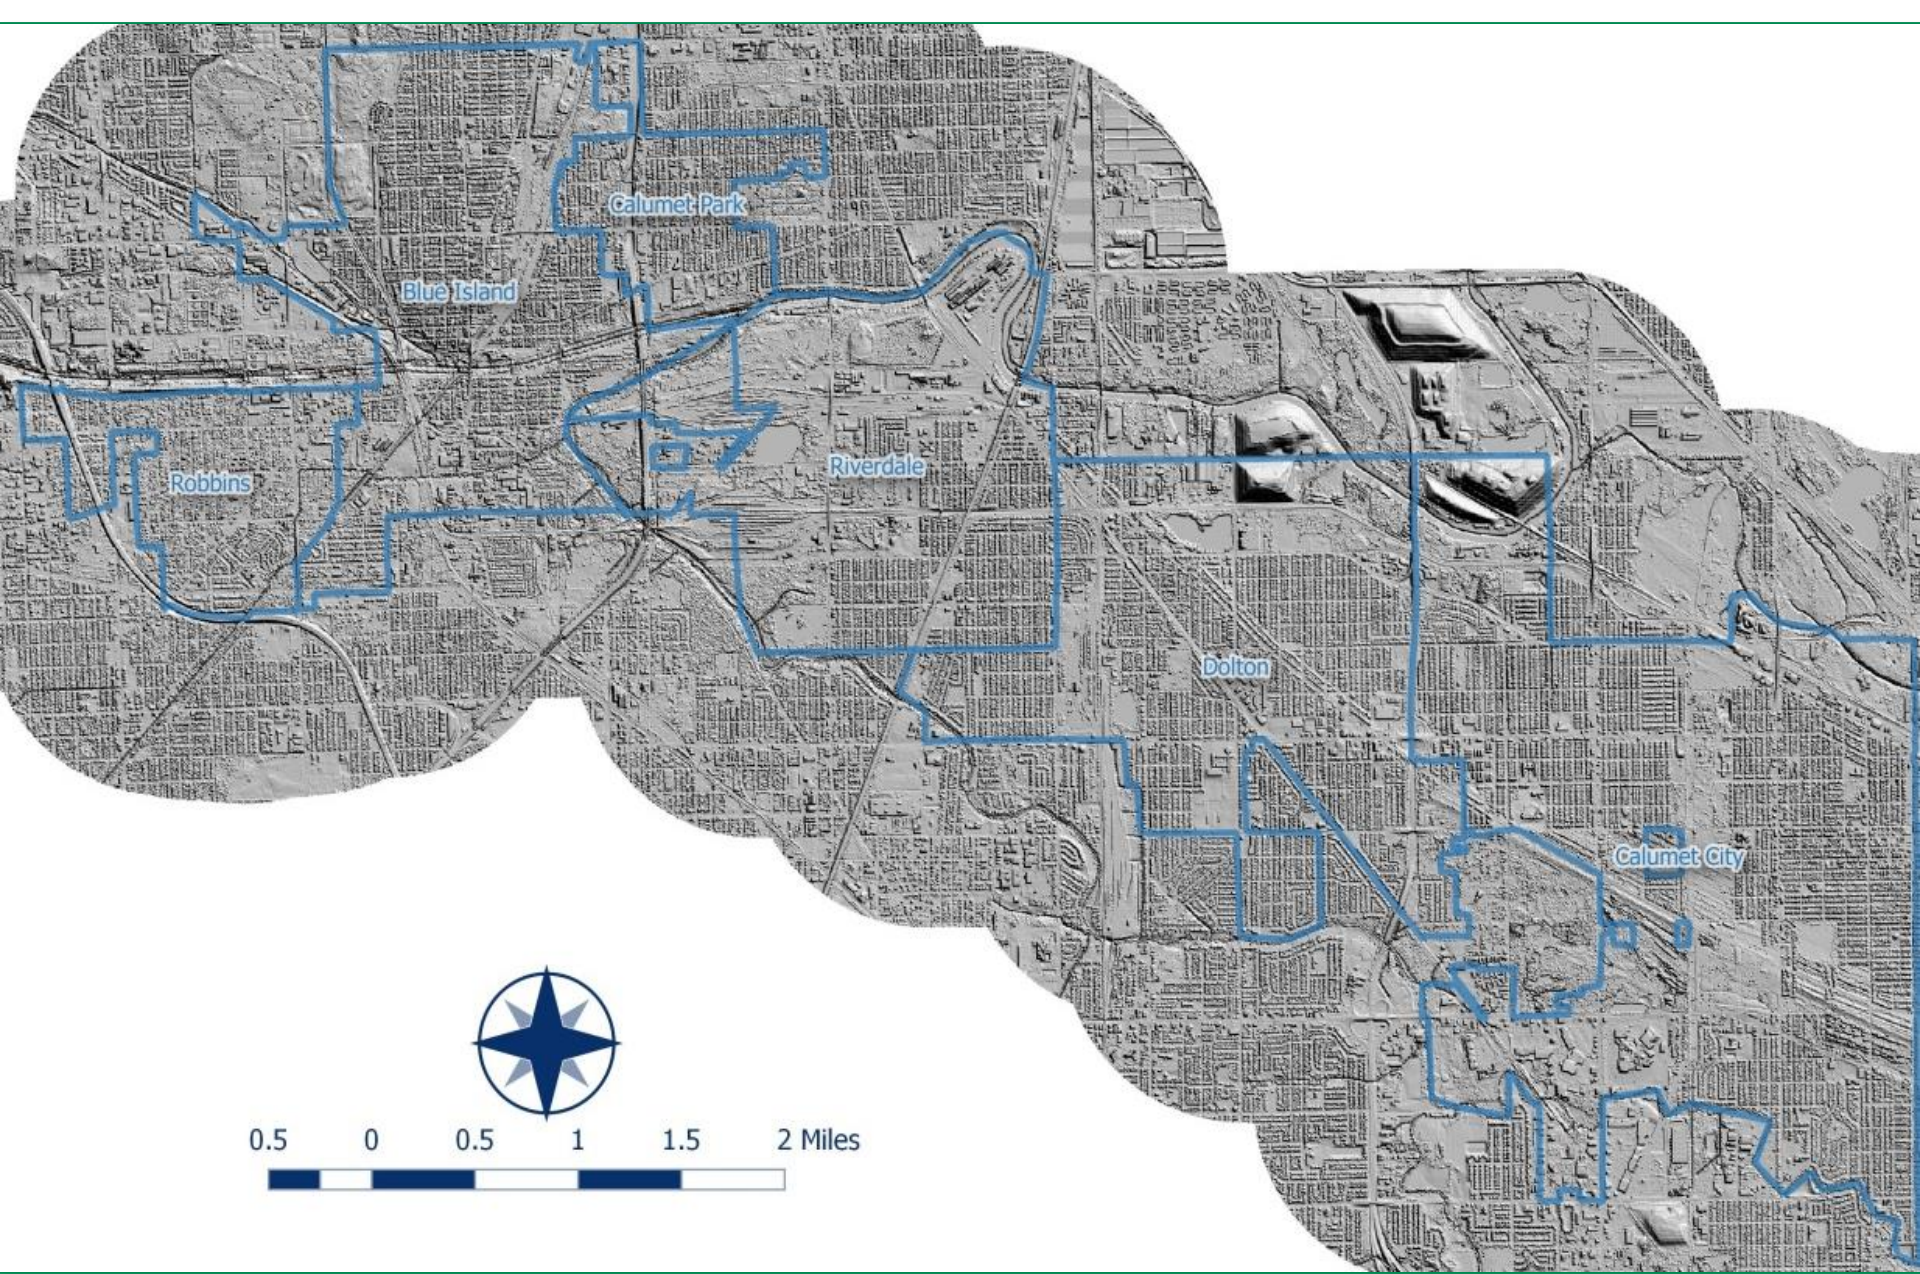

- Project Cut Sheets
- Grant Proposals
- 625 New Trees
- RainReady Socials
- Stormwater + Drinking Water Cohort

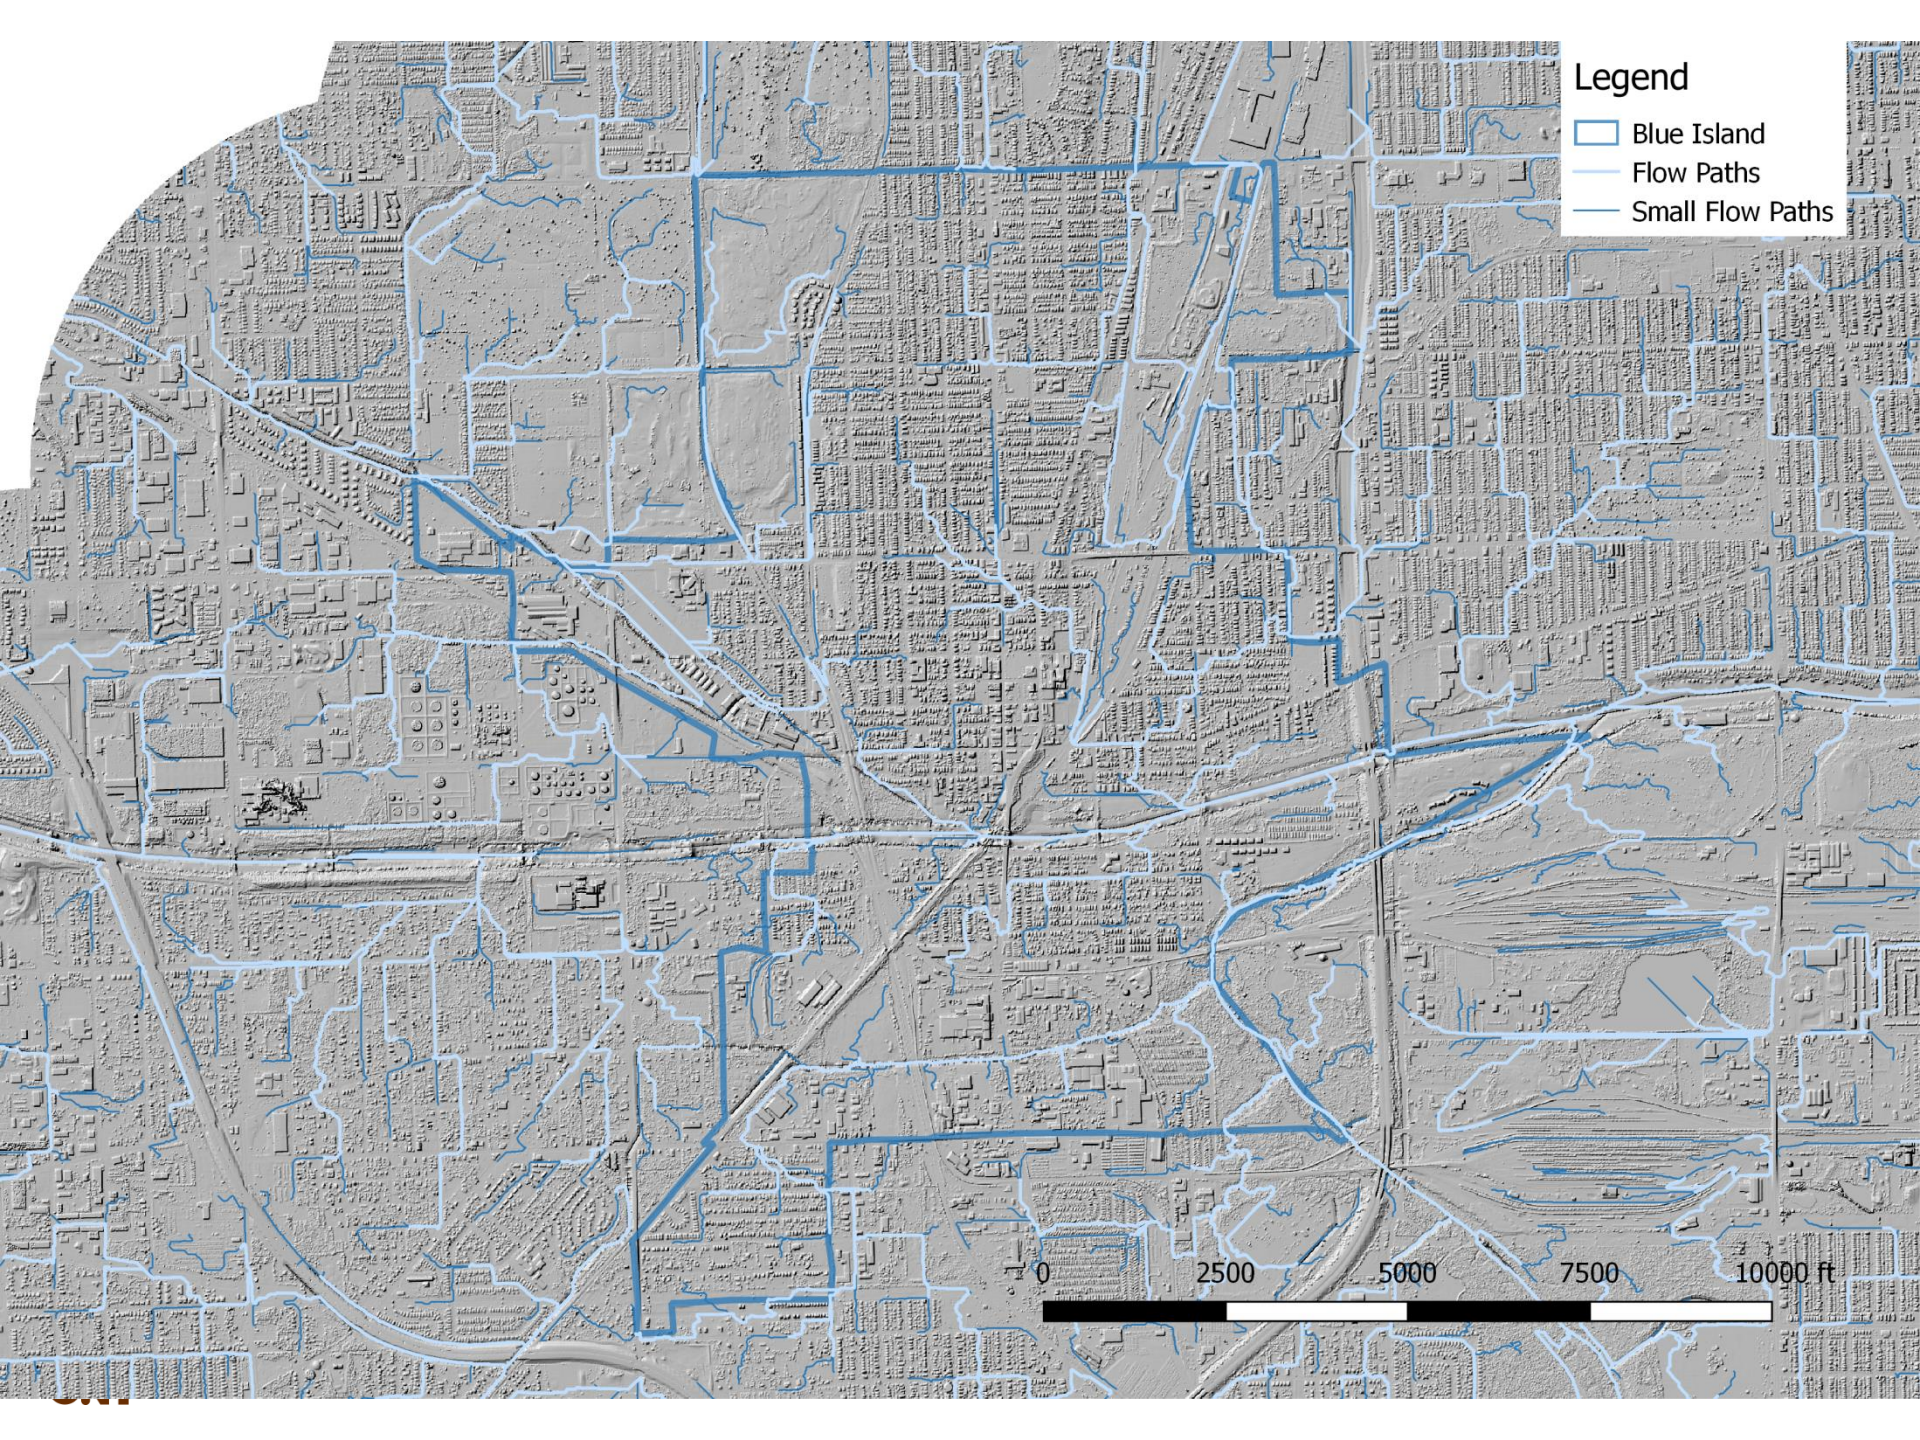

TOOL REVIEW

- LiDAR analysis – developing catchments, flow paths and depressions
- Show our planning tool
 - How we identify priority catchments
 - How we estimate green improvement benefits
 - Volume control
 - Runoff

CNT CATCHMENTS FROM LIDAR

- Used HU12 watershed as base geography (clipped 1 Mile buffer around the municipal boundaries)
- Used 7.5 ft. cells
- Used All, last return
- Thus keeping buildings in – we do not have building footprints for all six communities
- Use Cook County hydro layers to level and condition DEM
- Adjusted the accumulated flow to get approximately 30 acres
- Show flow paths
- Built depressions with no adjustment

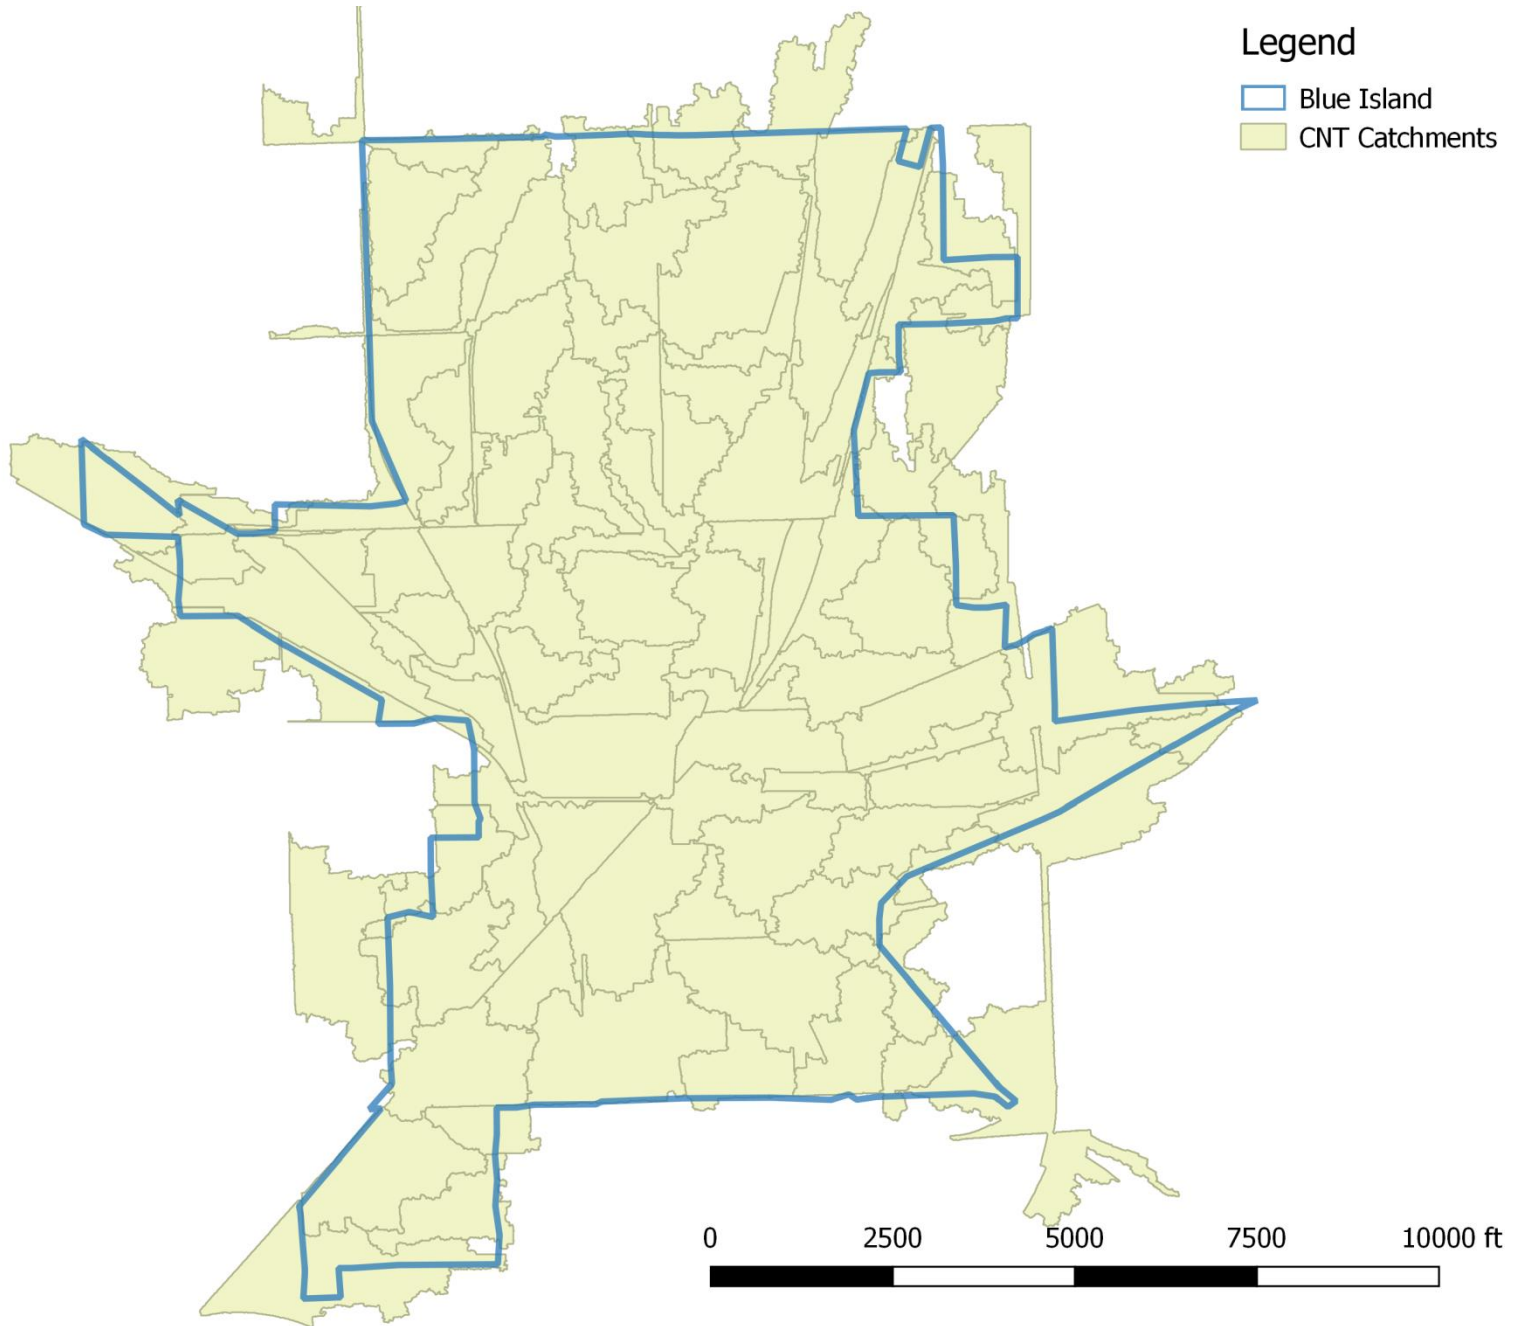

Legend

- Blue Island
- Flow Paths
- Small Flow Paths

0 2500 5000 7500 10000 ft

CNT/RAINREADY RESILIENCE PLANNING TOOL

Aids in identifying high risk areas. Then quantifies the benefits of local green improvements and estimates costs, allowing the RainReady team to plan implementation.

- Shows map of catchment in the six communities
- Ranks them with a flood risk score, and opportunity score
- Allows user to:
 - Use catchment or “sewershed” as base,
 - Understand land cover, land use, and other local characteristics,
 - Set volume control goal,
 - Choose green improvements to meet that goal,
 - See the benefits of plan implementation.
