Calumet Stormwater Collaborative | March 3, 2022

Urban Flooding Baseline: Project Goals

PROBLEM

- Define the problem of urban flooding in the Calumet region

TOOL

- Develop a mapping tool to identify high risk flooding

COMMUNITY

- Community collection of visual data to improve indicators

- We developed this tool to educate community members and leaders about causes of urban flooding so that they can be better prepared to advocate for change in their communities.

DEMO: ufb.cnt.org

Questions for Discussion

- What parts of the tool are you most excited about or would be useful to the work you do?
- Any organizations we should reach to share this tool?
- Would love to hear your feedback after you've explored the tool, but any immediate thoughts?
- Anything in the data that was surprising?
- Anything that is missing from the narrative or the advanced map tool?
- What are your reactions to the photo collection data?
- On what type of device do you see people using the tool most often (desktop, mobile, etc)?

THANK YOU
